

# Progression of Early Tactual Learning: Tactile Profile

## General Information:

- This document should be used to help develop a “Tactile Profile” for students with visual impairment who
  - are chronologically and/or developmentally functioning between the ages of birth to 5 years old; and/or
  - have struggled with the acquisition of tactile skills/have not made expected progress; and/or
  - may be considered “non-traditional tactile learners” or “non-readers”.
- This is an observational checklist to assist in determining the need for additional evaluation and instruction in specific skill areas.
- Many existing evaluation tools do not address the components of tactile learning in small enough increments that are both observable and measurable, especially for students with multiple disabilities.
- Since skills are interrelated, a student’s overall cognitive, emotional, and physical development may have a significant impact on how and why a student uses their hands.
- This profile is not the sole source for determining a student’s strengths and needs in relation to tactile development.
- The profile should be used in conjunction with the evaluation chart and instructional resources chart to determine instructional strategies.
- To gain the most accurate information, it is important that multiple evaluators (TVI, COMS, other staff, family members, etc.) collaborate to observe the student in a variety of settings. Ongoing observations will help identify whether the student consistently demonstrates a skill.
- Tactile skills development:
  - is dependent on the development of both gross and fine motor skills. Gross motor skills (large muscles) develop first and provide the foundation for fine motor (small muscle) development and refined tactile skills.
  - is generally acquired in a sequence from gross to fine motor, concrete to abstract, and awareness/attention to understanding, creating a broad range of tactile skills at each level before moving on to the next level.
  - should be combined with concept development and language acquisition in order to develop skills for literacy.

Note: For more information on the development of tactile skills, see the excerpt from *Nemeth At A Glance* (TSBVI 2017), in the Additional Resources Packet.

- This instrument includes:

- A “Questions” checklist that provides a short description of each important tactile skill, an “Answer” column and a column for taking notes.
- An “Evaluation & Information Gathering” chart that includes sources for student information and suggested evaluation tools that will assist in answering each question.
- An “Instructional Resources” chart that provides sources for general information, suggested activities, and guidance for creating appropriate activities.
- An “Additional Resources” packet.

# Progression of Early Tactual Learning: Tactile Profile/Questions Chart

## How to Score the Questions Checklist:

- It is important to complete the entire checklist because:
  - acquisition of tactile skills does not always occur at the same time or in the same sequence for all children.
  - a student may not follow the typical developmental sequence, causing gaps/holes in understanding (splinter skills) and problems with the acquisition of subsequent tactile skills.
  - splinter skills do not give a good representation of the overall abilities of the student.
- After completing the entire checklist, review your responses and take the following actions:
  - if the answer is “yes”, the skill is generalized and the student can do it in any environment without prompting
  - if the answer is “no”, refer to the corresponding question in the Instructional Resources document for strategies to teach the skill
  - if the answer is “don’t know”, refer to the corresponding question in the Evaluation and Information Gathering document for further evaluation

	Question	Answer	Notes
1	Are there any <b>medical conditions</b> that might impact the child’s tactile senses? (e.g., diabetes, seizure disorders, cerebral palsy, neuropathy)	Yes No Don’t Know	
2	Is the child taking any <b>medications</b> that could impact the sense of touch?	Yes No Don’t Know	
3	Is there any information that might indicate the	Yes	

	<p>child has experienced <b>highly aversive touch</b>? (e.g., prematurity, extended hospitalizations, abuse, neglect, use of hand-over-hand technique, *developmental trauma)</p> <p>*This can occur due to isolation associated with a lack of access to sensory information, an isolated environment, or a caregiver's lack of understanding of the sensory impairment.</p>	<p>No Don't Know</p>	
4	<p>Is there any indication of <b>sensory integration</b> issues? (e.g., need for excessive movement: spinning, rocking, flapping; need for pressure: wedges fingers under heavy objects, needs a lot of roughhousing/hugging; doesn't move enough: passive, sleepy; over-reactive to touch: startle or withdrawal response; over-reactive to movement: cries or vomits when moved suddenly, fearful of moving through space; inability to use senses simultaneously: can't look and touch or look and listen or listen and touch at the same time)</p>	<p>Yes No Don't Know</p>	
5	<p>Does the child primarily exhibit <b>reflexive motor responses</b>? (e.g. sucking reflex, neck righting reaction, reflexive palmar grasp, walking/stepping reflex, ATNR, STNR, protective extension reaction)</p>	<p>Yes No Don't Know</p>	
6	<p>Does the child have <b>positive emotional responses</b> to touch? (e.g., calms when held or petted, coos or snuggles when held)</p>	<p>Yes No Don't Know</p>	
7	<p>Does the child exhibit <b>intentional motor responses</b>? (e.g., patting or reaching towards something, batting, swiping, grasping, rolling toward).</p>	<p>Yes No Don't Know</p>	

8	Does the child use hands to <b>explore his own body</b> ?	Yes No Don't Know	
9	Does the child use <b>hands to explore objects that are in contact with her/his body</b> ? (e.g., clothing, bedding, toys, pets, food items)	Yes No Don't Know	
10	Does the child use <b>other body parts to explore objects that are in contact with her/his body</b> ? (e.g., feet, cheek, mouth, elbow)	Yes No Don't Know	
11	Does the child bring <b>hands/objects to her/his mouth</b> ?	Yes No Don't Know	
12	Does the child bring her or his hands together? (It is important to encourage the child to develop the use of both hands, even when the child tends to neglect using one hand.)	Yes No Don't Know	
13	Does the child <b>intentionally</b> use touch to make <b>contact with others</b> ? (e.g., kicking, grabbing fingers, leaning against, reaching towards, hitting, biting, banging on, patting, pulling on someone else's clothes or hair)	Yes No Don't Know	
14	Does the child use hands to sustain physical contact with others (as opposed to moving away or becoming extremely passive)?	Yes No Don't Know	
15	Does the child use hands to engage in <b>student-</b>	Yes	

	led mutual tactual exploration with an adult? (i.e., shared attention)	No Don't Know	
16	Does the child engage in <b>teacher-led</b> mutual tactual exploration with objects and/or actions? (e.g., shadowing, finger plays, riding, modeling, hand-under-hand)	Yes No Don't Know	
17	Does the child <b>intentionally</b> use touch to make contact with objects? (Kicking, reaching toward, batting, swiping)	Yes No Don't Know	
18	Does the child intentionally grasp and release objects, using palmar grasp or thumb and fingers?	Yes No Don't Know	
19	Does the child use <b>entire hand</b> in a variety of ways to engage in gross tactile exploration of objects? (e.g., squeezing, banging, holding, rubbing, lifting, turning, scratching, tangling fingers, transferring objects from hand to hand).	Yes No Don't Know	
20	Does the child use <b>hands (one or both)</b> for refined tactile exploration to obtain information about texture, hardness, temperature, shape, size, volume, and weight of larger objects by performing all of the following actions? <ul style="list-style-type: none"> <li>• Lateral Motion (rubbing across surface): Texture</li> <li>• Pressure (pressing, squeezing, poking): Hardness</li> <li>• Static Contact (hands resting on surface): Temperature</li> <li>• Enclosure (holding/grasping): Shape/size/volume</li> </ul>	Yes No Don't Know	

	<ul style="list-style-type: none"> <li>• Unsupported holding (holding in hand): Weight</li> <li>• Contour following (tracing contours): Global &amp; exact shape</li> </ul> <p>(Adapted from Sidebar 5.3, p. 127 in ECC Essentials and McLinden, Chapter 4, p 58-59)</p>		
21	Does the student show spatial awareness by using their hands in a systematic, organized way to locate objects in customary locations to place objects in specific locations (tactile search patterns).	Yes No Don't Know	
22	<p>Does the child use <b>fingers</b> for intentional, systematic tactile exploration to obtain information about texture, hardness, temperature, shape, size, volume, and weight of smaller objects by performing all of the following actions?</p> <ul style="list-style-type: none"> <li>• Lateral Motion (rubbing across surface): Texture</li> <li>• Pressure (pressing, squeezing, poking): Hardness</li> <li>• Static Contact (fingers resting on surface): Temperature</li> <li>• Enclosure (holding/grasping): Shape/size/volume</li> <li>• Unsupported holding (holding with fingers): Weight</li> <li>• Contour following (tracing contours, putting fingers into holes): Global &amp; exact shape</li> </ul> <p>(Adapted from Sidebar 5.3, p. 127 in <i>ECC Essentials</i>, &amp; <i>Learning Through Touch</i>, McLinden, Chapter 4, p 58-59)</p>	Yes No Don't Know	

23	Is the child beginning to make comparisons by noticing/responding to differences <b>in tactile qualities</b> of objects such as texture, shape, temperature, and size by pausing, labeling, moving back and forth between, etc.?	Yes No Don't Know	
24	Does the child show recognition of objects, based on their tactile qualities, by using them in a routine or functional manner? (e.g., put toothbrush in mouth, use cup for drinking, sit on chair).	Yes No Don't Know	
25	Can the child tactually recognize an unfamiliar object that is similar to a known object within an established meaning category? For example, does the child understand, through tactile exploration, that an unfamiliar cup can be used in the same way as a familiar cup? (Cup-ness)	Yes No Don't Know	
26	Shows recognition of the labels/names of familiar objects by tactually finding the requested object amongst a group of 3-4 objects.	Yes No Don't Know	
27	Does the child use fingers individually to determine information about the salient tactile features of three dimensional materials. (Eg. finding the handle on a cup, finding a small button on a device, toy, or keyboard, put small objects into small containers).	Yes No Don't Know	
28	Does the student have the finger strength and pincer grasp to manipulate and move objects that give some resistance? (e.g., turning a dial, pushing buttons, taking lids off, squeeze toothpaste, pulling zippers,	Yes No Don't Know	

	snapping and unsnapping, etc.)		
29	Does the student independently (without prompting) initiate tactile exploration of the environment? (this skill is a demonstration of the child's self-motivation & tactile curiosity).	Yes No Don't Know	
30	Does the child <b>independently</b> perform <b>complex motor planning</b> tasks during functional activities or play (e.g., putting pop beads together, stacking, stringing beads, sorting, putting objects in a container, nesting toys).  Note: <b>Taking apart</b> and <b>taking out</b> typically occur before <b>putting together</b> and <b>putting in</b> .	Yes No Don't Know	
31	Does the student show recognition of a variety of objects, textures, symbols, etc. that represent familiar activities and concepts?		
32	Does the student show recognition of tactual representations of words and letters?  Note: acquisition and generalization of this skill is a bridge to braille literacy and indicates readiness for pre-braille instruction.		

**Next Steps:** once it is determined by this Tactile Profile that the student is ready for pre-braille instruction, these resources may be helpful:

- *EVALS*: Beginning Concepts; Pre-Braille Checklists
- *Oregon Project*: Cognitive Skills (PreReading Section) and Compensatory Skills (Braille Readiness Section)
- *Braille Fundamentals*: Tracking Practice in Appendix
- *Mangold Program*
- *ABLS (Assessing Braille Literacy Skills)*
- *Perkins Activity & Resource Guide*: Functional Academics, Reading
- Center for Early Literacy Learning

# Progression of Early Tactual Learning:

## Evaluation Resources Chart

How to Use the Evaluation Resources Chart:

- After completing the entire checklist, review your responses and for any in which the answer is “don’t know”, refer to the corresponding question on this chart to find resources for further evaluation.

	Question	Evaluation & Information Gathering
1	Are there any <b>medical conditions</b> that might impact the child’s tactile senses? (e.g., diabetes, seizure disorders, cerebral palsy, neuropathy)	<ul style="list-style-type: none"> <li>Consult with parents</li> <li>Review medical records</li> <li>Individual Sensory Learning Profile Interview (Anthony)  <a href="https://vision.alberta.ca/media/99875/sensory%20profile.pdf">https://vision.alberta.ca/media/99875/sensory%20profile.pdf</a> </li> </ul>
2	Is the child taking any <b>medications</b> that could impact the sense of touch?	<ul style="list-style-type: none"> <li>Consult with parents</li> <li>Review medical records</li> <li>Individual Sensory Learning Profile Interview (Anthony)  <a href="https://vision.alberta.ca/media/99875/sensory%20profile.pdf">https://vision.alberta.ca/media/99875/sensory%20profile.pdf</a> </li> </ul>
3	<p>Is there any information that might indicate the child has experienced <b>highly aversive touch</b>? (e.g., prematurity, extended hospitalizations, abuse, neglect, use of hand-over-hand technique, *developmental trauma)</p> <p>*This can occur due to isolation associated with a lack of access to sensory information, an isolated environment, or a caregiver’s lack of understanding of the sensory impairment.</p>	<ul style="list-style-type: none"> <li>Consult with parents</li> <li>Review medical records</li> <li><i>INSITE Developmental Checklist: Taction - Responses to Touch and Handling</i>, 0-3 months</li> <li><i>Tactile Strategies</i> (Chen &amp; Downing), Chapter 3: Family Interview, p. 48-54</li> <li>Individual Sensory Learning Profile Interview (Anthony)  <a href="https://vision.alberta.ca/media/99875/sensory%20profile.pdf">https://vision.alberta.ca/media/99875/sensory%20profile.pdf</a> </li> <li><i>Functional Scheme</i> (Nielsen). # Progression of Early Tactual Learning:

## Instructional Resources Chart

How to Use the Instructional Resources Chart:

- After completing the entire checklist, review your responses and for any in which the answer is “no”, refer to the corresponding question on this chart for resources for instruction including activities, teaching strategies, and suggested materials.

	Question	Instructional Resources
1	Are there any <b>medical conditions</b> that might impact the child's tactile senses? (e.g., diabetes, seizure disorders, cerebral palsy, neuropathy)	NA
2	Is the child taking any <b>medications</b> that could impact the sense of touch?	NA
3	<p>Is there any information that might indicate the child has experienced <b>highly aversive touch</b>? (e.g., prematurity, extended hospitalizations, abuse, neglect, use of hand-over-hand technique, *developmental trauma)</p> <p>*This can occur due to isolation associated with a lack of access to sensory information, an isolated environment, or a caregiver's lack of understanding of the sensory impairment.</p>	<ul style="list-style-type: none"> <li>• <i>Tactile Strategies</i> (Chen &amp; Downing), Chapters 2, 3, 4 &amp; 7</li> <li>• <i>Remarkable Conversations</i> (Miles &amp; Riggio), Chapters 1, 4 &amp; 6</li> <li>• <i>Talking the Language of the Hands to the Hands</i>, Miles <a href="https://www.nationaldb.org/info-center/talking-hands-to-hands-factsheet/">https://www.nationaldb.org/info-center/talking-hands-to-hands-factsheet/</a></li> <li>• Active Learning Space website: <a href="http://www.activelearningspace.org">www.activelearningspace.org</a>: Principles tab - Social and Emotional Development, Five Phases of Active Learning</li> <li>• <i>Are You Blind?</i> (Nielsen)</li> <li>• Five Phases of Educational Treatment Used in Active Learning Based on Excerpts from <i>Are You Blind?</i> (Hurst) <a href="https://www.tsbvi.edu/five-phases-of-educational-treatment-used-in-active-learning-based-on-excerpts-from-are-you-blind-by-dr-lilli-nielsen-2">https://www.tsbvi.edu/five-phases-of-educational-treatment-used-in-active-learning-based-on-excerpts-from-are-you-blind-by-dr-lilli-nielsen-2</a></li> </ul>

		<ul style="list-style-type: none"> <li>• Incorporating Active Learning Theory Into Activity Routines (Moss &amp; Shafer) <a href="https://www.tsbvi.edu/incorporating-active-learning-theory-into-activity-routines">https://www.tsbvi.edu/incorporating-active-learning-theory-into-activity-routines</a></li> <li>• <i>Ready Bodies, Learning Minds: Cultivating the Complete Child</i>, 3rd edition (Oden), Chapter 3: The Tactile System <a href="http://www.readybodies.com/product-category/rblm-books/">http://www.readybodies.com/product-category/rblm-books/</a></li> <li>• <i>Ready Bodies, Learning Minds</i>, 2nd edition (Oden), Chapter 3, pp.41-49</li> <li>• <i>Ready Bodies, Learning Minds: Activity Guide</i>, 2nd edition (Oden)</li> <li>• Perkins elearning: Tactile Processing, parts 1 &amp; 2 <a href="https://www.perkinselearning.org/videos/teachable-moment/tactile-processing-part-1#transcript">https://www.perkinselearning.org/videos/teachable-moment/tactile-processing-part-1#transcript</a></li> <li>• <i>Keys to Educational Success: Teaching Students with Visual Impairments and Multiple Disabilities</i> (Sacks &amp; Zatta), p. 29</li> <li>• Tactile Processing, Parts 1 &amp; 2 <a href="https://www.perkinselearning.org/videos/teachable-moment/tactile-processing-part-1#transcript">https://www.perkinselearning.org/videos/teachable-moment/tactile-processing-part-1#transcript</a></li> <li>•</li> </ul>
4	<p>Is there any indication of <b>sensory integration</b> issues? (e.g., need for excessive movement: spinning, rocking, flapping; need for pressure: wedges fingers under heavy objects, needs a lot of roughhousing/hugging; doesn't move enough: passive, sleepy; over-reactive to touch: startle or withdrawal response; over-reactive to movement: cries or vomits when moved suddenly, fearful of moving through space; inability to use senses simultaneously: can't look and touch or look and listen or listen and touch at the same time)</p>	<ul style="list-style-type: none"> <li>• Sensory Integration and Sensory Motor Activities (Ricketts) <a href="https://www.tsbvi.edu/143-mivi-general/1727-sensory-integration-and-sensory-motor-activities">https://www.tsbvi.edu/143-mivi-general/1727-sensory-integration-and-sensory-motor-activities</a></li> <li>• Occupational Therapy and Sensory Integration for Visual Impairment (Ricketts) <a href="https://www.tsbvi.edu/resources/3159-occupational-therapy-and-sensory-integration-for-visual-impairment/">https://www.tsbvi.edu/resources/3159-occupational-therapy-and-sensory-integration-for-visual-impairment/</a></li> <li>• Sensational Brain <a href="https://sensationalbrain.com/">https://sensationalbrain.com/</a></li> <li>• <i>Ready Bodies, Learning Minds: Cultivating the Complete Child</i>, 3rd edition (Oden): Tactile - pp. 45-51; Vestibular - pp. 59-71; Proprioceptive - pp. 73-79 <a href="http://www.readybodies.com/product-category/rblm-books/">http://www.readybodies.com/product-category/rblm-books/</a></li> <li>• Ready Bodies, Learning Minds website: <a href="https://readybodieslearningminds.com/">https://readybodieslearningminds.com/</a></li> <li>• <i>Ready Bodies, Learning Minds</i>, 2nd edition (Oden), Chapters 3-5</li> </ul>
